November 2016

Maximizing Profits for Solar Manufacturers

AURORA SOLAR TECHNOLOGIES

has developed a **disruptive** new solar cell profiling technology that allows solar cell producers to increase cell power and yield.

Attaining profitability in a sector with very slim margins is the solar industry's most urgent imperative. Despite this, cell fab lines are running without the most basic inline measurement and control resulting in very poor product uniformity and high scrap rates.

Aurora's non-invasive sensor technology brings cell producers rapid payback by producing more uniform, higher efficiency cells.

THE OPPORTUNITY - The solar industry is expected to triple by 2020.

55,000 megawatts of solar panels were installed in 2015 and it is forecasted to grow another 15% in 2016.

The motivation to **reduce costs** and **increase efficiency** is high, as the solar sector downgrades 15-25% of their production.

Aurora's products **improve cell efficiency and eliminate downgrades.**

THE PRODUCTS

Decima 3T™

Inline, non-contacting infrared wafer profiling system essential to produce high efficiency cells.

Aurora Veritas™ Software visualization and statistical process control.

Expert Services

Expertise to deliver solutions for existing and new lines with guaranteed results.

BUSINESS STRATEGY

Leverage global demand for clean and alternative energy in an industry with tight margins by focusing on the top tier manufacturers producing the highest efficiency cells and delivering guaranteed results.

Company growth by delivering the Veritas Quality Control System guaranteed to eliminate downgrades.

Disrupt the industry with the only **inline MEASURE, VISUALIZE and CONTROL** solution.

Deploy a proven management team that has done it before.
